

Electronic future

The statutory task of the Traffic Accident Board is to provide statements and recommendations on compensation relating to traffic accidents, as required by legislation. The benefits that the Philips SpeechLive speech recognition application offers for the Board's lawyers, who produce up to as many as 2,000 statements a year, are indisputable.

The Traffic Accident Board is a statutory body that processes compensation matters relating to motor liability insurance. The Board provides recommendations, but in practice, insurance companies adhere to them almost without exception. Statements are requested by insurance companies, the Finnish Motor Insurers' Centre, the State Treasury, Finnish courts of law, as well as policy holders and injured parties. The damages that the Board deals with are personal injuries and damages to property. Furthermore, the Traffic Accident Board publishes a collection of standards and guidelines relating to compensations each year.

We process up to as many as 2,000 case-specific statement requests every year, so producing the statements takes a significant amount of time. In this work, Philips SpeechLive is an excellent tool.
